

MEN'S HEALTH CHECKLIST

Men, you've been taught how to handle a flat tire, a leaky faucet or maybe even how to patch a hole in the wall, but do you know what it takes to stay healthy? Here are a few numbers to keep your health in check.

Normal BMI is
18.5-24.9

33%
of men have high blood pressure (hypertension)

of adult men are obese

Blood pressure higher than
135/80 mm Hg

may be a sign of diabetes or other cardiovascular and metabolic disease

If your BMI is between
30-39.9
you're considered obese

40 and over is considered morbidly obese

120/80 mm Hg

Normal blood pressure range (lower for patients with other illnesses)

Preferred cholesterol range: Less than
200 mg/dL

70-130 mg/dL

Target range for low-density lipoprotein (LDL) or the "bad" cholesterol

60 mg/dL or over: Healthy HDL (your good cholesterol) level. HDL under 40 is thought of as being at risk for heart disease

Higher levels of HDL = lower risk of heart disease

Triglycerides are a type of fat found in your blood. Too much of this fat may raise your risk of heart disease, diabetes and stroke. Lower numbers are better.

Less than
150 mg/dL
Healthy triglyceride level

TOP THREE CANCERS FOR MEN

1. Prostate
2. Lung
3. Colorectal

150 minutes or **2½ hours**

Recommended amount of mild physical activity for adults per week. An example of a mild activity is brisk walking.

7-9

Recommended hours of sleep for adults. Poor sleep habits bring a higher risk for heart disease, diabetes, depression, erectile dysfunction and obesity. It may also cause more severe Lower Urinary Tract Symptoms (LUTS) in some men.

See your doctor – routine checkups can spot a number of conditions that can impact a man's health, including prostate cancer, which affects

1 IN 7 MEN

CHECKUPS & SCREENINGS	WHY?	WHEN
Physical Exam	Preventative care for total health	Annually
Testicular Exam	Screens for testicular cancer	Annually, during physical exam or monthly if lumps are found during self-exams
Blood Pressure	Screens for hypertension (high blood pressure)	Every 2 years, or as directed by your doctor
Cholesterol	If high, can lead to heart disease	Every 5 years, or as directed by your doctor
Prostate-Specific Antigen (PSA) Test	Screens for prostate cancer	Starting at age 55, or as directed by your doctor. African American men and men with a family history are at a higher risk for developing prostate cancer. Talk to your doctor about whether prostate cancer screening is right for you.
A1C Test	Screens for high blood sugar levels, which could mean a greater risk for diabetes	If your blood pressure is higher than 135/80 or if you take medicine for high blood pressure, talk to your doctor about screening for diabetes
