Upper Tract Urothelial Carcinoma (UTUC) may be found in the bladder, kidney, ureter and urethra but it is mostly found in the bladder.

The main types of immunotherapy to fight urothelial cancers are called Immune Checkpoint Inhibitors.

Immunotherapy helps the immune system destroy cancer cells.

The main types of immunotherapy to fight urothelial cancers are called Immune Checkpoint Inhibitors.

Immune checkpoint inhibitors are antibodies given intravenously to block the “checkpoints” that cancer cells use to avoid being attacked by the immune system.

Immunotherapy drugs to treat advanced UC include: atezolizumab, durvalumab, avelumab, nivolumab, pembrolizumab

Fighting UROTHELIAL CANCER with Immunotherapy.

Immunotherapy is a cancer treatment that boosts the body’s own immune system to fight cancer.

WHY USE IMMUNOTHERAPY?

Immunotherapy helps the immune system destroy cancer cells.

Upper Tract Urothelial Carcinoma (UTUC) may be found in the bladder, kidney, ureter and urethra but it is mostly found in the bladder.

Immune checkpoint inhibitors are antibodies given intravenously to block the “checkpoints” that cancer cells use to avoid being attacked by the immune system.

Immunotherapy drugs to treat advanced UC include: atezolizumab, durvalumab, avelumab, nivolumab, pembrolizumab

RISKS AND BENEFITS

EFFECTIVE in treating urothelial cancer

While patients can benefit, there is a risk that healthy cells may be targeted. Autoimmune problems are usually manageable but, in rare cases, can be serious.
